

We are committed to working together with schools

Pupils from secondary schools and tertiary level colleges have an opportunity to apply the theoretical knowledge they have acquired in practice at the internal company training centre at GeWiS Slovakia s.r.o.

Secondary schools and vocational schools

A contractual agreement has been entered into with two secondary schools (Handlova and Prievidza) and with a secondary level vocational school in Prievidza. Each year about 25 pupils aged from 16 to 18, accompanied by their teachers, attend this course lasting 20 weeks or so. Specialists working at our training centre have worked out a programme providing an insight into the various activities in our production facilities on site.

Together with theoretical knowledge, this will give students a really solid basis upon which to make their impending career choice.

Our objective is to kindle the interest of the pupils for a career working at GeWiS Slovakia s.r.o. There are vacancies for about 40% of the pupils attending our courses.

Tertiary level colleges

Students at the tertiary level colleges have an opportunity to take up a two-month **professional placement** on a voluntary basis as part of their course. Each year 10 or so students from the machine building sector acquaint themselves with the engineering professions practised at GeWiS Slovakia s.r.o. through their practical work assignments.

Upon request students studying mechanical engineering will be provided with **support when writing their dissertations for Bachelor's and Master's degrees.**
